

YOUR PROJECT
OUR EXPERIENCE

OFFICE

A modern office interior with large windows, white desks, and a blue chair. The space is bright and open-plan, with a high ceiling and a carpeted floor. The windows offer a view of a cityscape.

WORKPLACES THAT WORK BETTER

**Over our lifetimes,
the average person spends
around 90,000 hours
in the workplace.
It's our responsibility
to make these spaces
better for everyone.**

This isn't just about happiness – even if happier workers are better workers. It's about wellbeing in the workplace. Wellbeing boosts productivity. It improves performance, reduces stress and contributes to a work-life balance that brings out the best in people. And one of the ways we can promote wellbeing in the workplace is through design.

By considering aesthetics, light, shade and zoning, intelligent design can transform even the most uniform open-plan office into a vibrant, dynamic space that balances contemporary architecture and statement design with visual, and acoustic comfort that measurably enhances wellbeing and happiness, productivity and performance.

Even beyond these considerations, the principles we use in enabling great office design can create more functionally effective spaces for working. Spaces for close collaboration and quiet concentration; spaces that keep conversations private, or open the floor to discussion and debate – and spaces that aid focus while inspiring workers and visitors alike. This is our task, our responsibility and our opportunity, together, to create workspaces that work better.

YOUR PROJECT:

1 OPEN OFFICE / COLLABORATION AREA

Office employees cite the intrusion of unwanted noise as a leading factor in workplace dissatisfaction, reduced effectiveness, and higher stress. Ceiling tiles, offering the ideal combination of sound absorption and sound blocking, provide the right acoustic balance in open plan environments.

2 PRIVATE OFFICE

Individual offices demand privacy and ability to focus. Selecting office ceiling tiles with balanced acoustic performance, the ideal combination of sound absorption and sound blocking, can help keep private offices private.

3 LOBBY / RECEPTION

You only get one chance to make a first impression. Office ceiling solutions with balanced acoustic performance are available in a variety of materials, styles and colours to match the look and feel of any space.

4 CONFERENCE ROOM

Like private offices, conference rooms have need for confidentiality. Keep conversations private in conference rooms with balanced acoustic solutions, the ideal combination of sound absorption and sound blocking.

5 CORRIDOR

Corridors and hallways require the functionality to handle high-traffic and the design flexibility to seamlessly connect the key spaces. Help reduce unwanted noise coming from noisy corridor with ceiling tiles offering balanced acoustics.

6 CAFETERIA

Cafeterias require the functionality of a kitchen with the comfort and style of a conference room. Create a space for employees to escape from the stress of the working day. Use office ceiling tiles to create a fun space to decompress and also manage office buzz.

OUR RECOMMENDATION:

- Ultima+ OP with TechZone
- Floating ceilings
- Metal ceilings with acoustic infill

- Ultima+ dB
- Perla dB

- Wood Channelled
- Floating ceilings
- Eleganza*
